Supplementary Information of

Benthic-pelagic coupling as a suggested mechanism for PFAS transfer across trophic levels in the northern Baltic Sea

Table S1. Concentrations (ng/g dw) of the analysed PFAS compounds in macrozooplankton (*Mysis*) and mesozooplankton (*Limnocalanus* and ZPL community) in the Bothnian Sea and the Gulf of Finland, northern Baltic Sea. Concentrations below the limit of quantification (LOQ) were assumed as zero. PFHxA = Perfluorohexanoic acid, PFHpA = Perfluoroheptanoic acid, PFOA = Perfluorooctanoic acid, PFNA = Perfluorononanoic acid, PFDA = Perfluorodecanoic acid, PFUnA = Perfluoroundecanoic acid, PFDoA = Perfluorododecanoic acid, PFTrA = Perfluorotridecanoic acid, PFTeA = Perfluorotetradecanoic acid, PFHxS = Perfluorohexanesulphonic acid, PFHpS = Perfluoroheptanesulfonic acid, PFOS = Perfluorooctane sulfonate, PFDS = Perfluorodecanesulfonic acid

Area	Station	Taxa	perfluoroalkyl carboxylic acids (PFCA) ng/g									perfluoroalkyl sulfonates (PFSA) ng/g				sum (ng/g)
			PFHxA	PFHpA	PFOA	PFNA	PFDA	PFUnA	PFDoA	PFTrA	PFTeA	PFHxS	PFHpS	PFOS	PFDS
